

VSWATCH CLUB

SOMMAIRE

INTRODUCTION

ValSan is a 3D collection of 2022 Watches. In this Watchpaper, you will discover how the VSWatch team wants to offer you a new NFT experience. The innovation of a title of ownership linked to an object, here a watch, orchestrated by the technology of the Blockchain. ValSan is the ambition to give birth to a new way of holding a material good from a dematerialized tool, an NFT. Commonly used for its artistic side or for P2E game creation projects, VSWatch wants to highlight the clean use of an NFT in the current world in order to have traceability on the transactions performed, security and authenticity without flaw. Our long-term ambition is to become Elrond's first boutique of reference.

Thus, in order to become so, we will focus our development on several important pillars:

- Having a committed and cohesive community that will be rewarded for its support;
- Respect the deadlines and the various stages announced on the Watchmap;
- Working with qualified people, delivering high quality products and services.

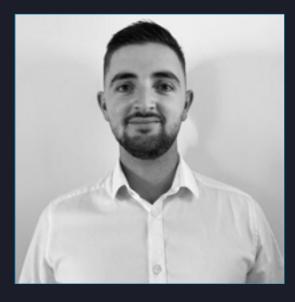

TEAM

CREATORS

Valentin

After obtaining my engineering degree, I specialized in operational safety in the Naval field for 3 years. Since 2019, I have been in the world of Blockchain as an investor at first and in the NFT since September. I am passionate about watches, new technologies and motor sport. I handle the project strategy, administrative/financial tasks and partnerships of VSWatch.

Sandro

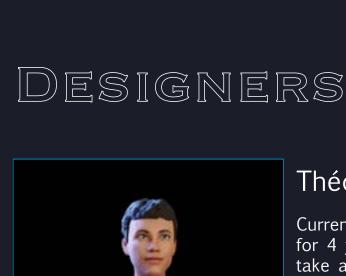

Formerly in the graphics industry, I am a person passionate about watches and technology in general and therefore blockchain. I am one of the creators of the VSWatch project and My role is to manage the team with the help of Valentin as well as implement the strategies for the smooth running of the project and the action plans. I also take care of community management and sometimes produce some visuals for communication.

Théo

Currently a student in master degree in industrial design for 4 years, I specialized in automotive design. I started to take an interest in cryptocurrencies in 2016, but then in 2019 I started to invest. Loving beautiful objects, I have always been interested in watches and having the opportunity to work on an NFT related to this world is exciting. For my part, I am part of the design team, I imagine and I model the models of VSWatch watches.

Cyrielle

After I got my engineering degree, I became interested in design and design, I wanted to learn new skills, to see new horizons. I knew by name the world of cryptocurrencies and NFT, seeing passing from time to time people talking about this subject on networks. It was with the VSWatch team that I had the opportunity to get started. A set of elements, such as project values, content, and the desire to learn, pushed me to join the project. To date, I am part of the design team, where I imagine and model the first NFT of VSWatch.

03 COLLECTION

Hosted on the Elrond Blockchain, each NFT will be categorized by different attributes (dial, bracelet, colors used), which will establish a level of rarity between each model. We chose to create a first collection of a 2022 supply to mark the first series of VSWatch. The Smart Contract based on the Elrond Blockchain technology will guarantee a random distribution of NFT during the launch of our mint.

The first series will consist of 5 models:

- DW (Diamond Watch): 42 NFT;
- GW (Gold Watch): 180 NFT;
- SW (Silver Watch): 400 NFT;
- BW (Bronze Watch): 600 NFT;
- CW (Common Watch): 800 NFT;

Supply : 2022 —

Presale (WL & OG): 500 SFTS 0.75 EGLD

Public Sale: 1522 SFTS 1 EGLD

04 WATCH BOX

In order not to influence the dirty public on sales and to keep a little suspense on the different models of watches, we opted for a case sft when we proceed with mint. This case sft will burn on the VSWatch website and the smart contract will automatically send you a random watch model.

- 1 SFT = 1 CASE
- 1 CASE = 1 VSWatch NFT

This strategy will allow us to delay but also to avoid a drop in the price for our holders.

05

PERSPECTIVES

The objective of the project is to create a limited, exceptional watch collection and become the first reference shop in watchmaking on the Elrond blockchain technology. To achieve this goal, our development focuses on several project chapters.

Chapter 1 is the beginning of the project.

We constitute the team, the project planning, the marketing and communication strategy in order to respect our Watchmap.

PERSPECTIVES

Chapter 2 is a big step for us.

It consists in the search for partnerships, the first reveals of our collection, many giveaways to thank our community for following us and finally to set up the private sale reserved for our members Watchlist & OG. The public sale will be held a few days later. The dates of the private and public sale will be announced later.*

Chapter 3 is development.

The longer chapter is crucial because we're going to start producing watches. In view of the important working time and to produce exceptional and quality watches, we have divided into 3 phases. Short-term, medium-term and long-term which are detailed below:

- 3.1 : Short-term perspective ;

- 3.2 : Medium-term perspective ;

- 3.3 : Long-term perspective.

*In order to thank our community for following us from the beginning and supporting us, we are going to win a very big surprise, a luxury watch to one of the holders of the private sale (Watchlist & OG) by draw (draw on the supply of 500 NFTs). This surprise will be repeated following our public sale where another holder will be drawn for another luxury watch as a reward (draw on the 2022 NFTs supply).

PERSPECTIVES

3.1. Short term perspective:

In order to animate and reward our community, this phase 3.1 consists in setting up a lottery every week for holders. Every week we will announce on Monday the prize to be won for the week and the result of the game will be announced on Friday. The prize winner will receive the prize directly at the address provided to us. The value of the prize to be won each week will be proportional to the scarcity of the NFT. Only holders whose NFTs are in their wallet and therefore not listed on a marketplace, will be eligible for participation.

You will have understood, more NFT in his wallet, will give you more chances to win the prize of the week. As explained, rarity will give the possibility to win a watch with more values of which here is the detail:

- DW (42 supply): shows between 1000 and 3000€;
- GW (180 supply): shows between 500 and 1000€;
- SW (400 supply): shows between 250 and 500€
- BW (600 supply): shows between 150 and 250€
- CW (800 supply): shows between 0 and 150€.

This lottery organized every week will allow us to animate the community and reward first the holders of the VSWatch project, and second, for us, to continue to develop our project to reach the goal of our first series of unique pieces.

05

PERSPECTIVES

3.2. Medium term Perspective:

The goal of our eventual project is to create a unique watch that will be offered to all NFT VSWatch regulators. For this, we have the opportunity to work in partnership with a brand to produce watches that reflect our collection or launch our production with a manufacturer. The next step is to set up incubation. This step is intended to block your NFT in a Smart Contract that will generate the \$VST project governance token. Using the token itself will give you the possibility to receive your watch in physics. The scarcity of the model plays a role in incubation. Indeed, the number of tokens received will be higher for a Diamond Watch than for a Gold Watch. Again, the more NFT you hold, the more tokens you will receive. The goal of this strategy will be for our watch holders to receive their watch more quickly if they have several incubated VSWatch NFT, but also for us to ensure that the watches are distributed in waves. The movement of watches will therefore be more fluid and will limit the waiting time before reception. This will allow us to initially save time on the production of watches but also in a second time to reduce the number of NFT of the collection on secondary markets, which will increase scarcity. From a certain number of tokens, you will be able to unlock the routing of your watch and receive a certificate of authenticity in the form of an NFT. This certificate will be sent to its owner.

)5

PERSPECTIVES

3.3. Long-term perspective:

From a long-term perspective, the VSWatch project aims to become the first Elrond reference shop in the field of watchmaking and to enable the adoption of micro-payments (Zoid Pay, UTRUST, etc.). Being an holder of an nft vswatch will give you advantages for our future shop, including discounts on our collection. The innovation of this project is to be the sole owner of a limited part associated with a certificate of authenticity at an erd address or an Elrond herotag. Traceability, security and authenticity. In addition, we want to prove by its use, that the NFT is not only a means of speculation, but a tool that will be useful to us in our daily life by the various advantages it offers notably by the Web3, a decentralized future, which will be more transparent and secure (certified collectibles, management of access to a streaming platform, management of decentralized distribution of tickets for access to an event, etc.).

WATCHMAP

Chap1: Start

- VSWatch settle on ElrondNetwork
- Socials: Twitter/Discord/Website/Instagram
- Opening of the watchlist to the public
- Various giveaways and games
- Watchpaper v1
- Network marketing
- First Reveal

Chap2: Construction

- Partnerships with Elrond Projects
- Watchpaper v2
- Second Reveal
- Various giveaways and games
- Presale: First drop (WL/OG supply 500)
- Public sale: Second drop (supply 1522)

Chap3: Production

- Rewards for holders
- Lottery
- Watchpaper V3
- Burn of Watch box
- Partnership IRL
- Work on IRL Watch product
- Working on \$VST token governance

Chap 4: Launch of our Store

QUESTIONS

1. Is there a "Whitelist" role and an "OG" role?

Yes, we have given the name of the "Watchlist" role, which is commonly called the Whitelist role. This role gives the advantage over the price of mint and participates in the presale. This role will be limited to 400 members. The "OG" role gives the right to many significant benefits, without penalizing newcomers. This role will be limited to 50 members. The benefits of the OG role are:

- Be WL automatically for all our series Mint before WL
- Have exclusive information in advance
 Votes for certain decisions
 Exclusive rewards

2. What's the date of the mint?

We will announce 3 weeks in advance the date when we will launch the mint. The date will be communicated in the next version of the watchpaper.

QUESTIONS

3. How will you start the production of watches?

We have two options that are important to both of us:

- Working directly with a French/Swiss manufacturer;
 Working in partnership with a brand that wants to gain visibility.

We work every day on the best solution to offer you exceptional and quality watches.

4. Do you have partnerships with elrond projects?

For the moment we are discussing with some projects. We have identified the different projects with which we share the same values and the strategies of partnerships with each one. Partnerships will be announced as the project progresses. We are open to discussion if you would like to work with us.
